

Project Design Phase

Proposed Solution

Date	15 June 2026
Team ID	
Project Name	AI Powered Video Script Generator
Maximum Marks	2 Marks

Proposed Solution Template

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Many content creators, students, startups, and small businesses spend a considerable amount of time writing promotional video scripts. Creating an engaging hook, maintaining the flow, and ending with a strong call-to-action requires creativity and marketing knowledge, making the process slow and challenging.
2.	Idea / Solution description	The proposed solution is an AI-powered web application that generates complete promotional video scripts based on simple user inputs such as product details, target audience, platform, tone, and video duration. Using the Groq API with the LLaMA model, the application produces a hook, script, scene suggestions, and a call-to-action within seconds.
3.	Novelty / Uniqueness	Unlike traditional writing methods, the application combines multiple outputs in a single workflow. Instead of generating only text, it provides a complete marketing-oriented script structure, helping users

		save time while maintaining quality and consistency.
4.	Social Impact / Customer Satisfaction	The solution makes content creation accessible to users who may not have professional writing skills. It reduces effort, improves productivity, and enables small businesses and creators to produce better marketing content without additional cost.
5.	Business Model (Revenue Model)	The application can follow a freemium model where basic script generation is free, while premium plans offer advanced features such as multiple script variations, longer outputs, additional templates, and priority access.
6.	Scalability of the Solution	The solution can be expanded by supporting multiple languages, different content formats such as blogs and advertisements, voice generation, video creation, and integration with popular social media platforms.
