

EMPATHY MAP

DATE	30 JUNE 2026
TEAM ID	KANAK DHINDHWAL , ISHA SAINI , BALJEET KAUR
PROJECT NAME	AI POWERED VIDEO SCRIPT GENERATOR
MAXIMUM MARKS	

To better understand our users, we created an empathy map. This helps us look at the problem from the user’s perspective by focusing on what they say, think, do, and feel when they try to create video scripts or generate content ideas.

Our target users include content creators, students, and digital marketers who regularly need to produce engaging video content.

Empathy Map Table

Perspective	User Insights
Says	“I need new ideas for my next video.” “Writing scripts takes too much time.” “I want my content to be more engaging.” “I don’t know how to structure my script properly.”
Thinks	“Will this idea work well with my audience?” “How can I make my content different from others?” “I hope I don’t run out of ideas.” “There should be an easier way to write scripts.”
Does	Looks for inspiration on YouTube and social media, watches trending videos, takes rough notes, and tries to rewrite scripts multiple times before finalizing.
Feels	Often feels stuck or frustrated when ideas don’t come easily, stressed due to deadlines, uncertain about content quality, but also excited when a good idea finally comes together.

This empathy map helps us clearly understand the user’s mindset and challenges. It also guided us in designing a solution that reduces effort in brainstorming and script writing, while improving creativity and productivity.
